01 THE AGENTIC SPECTRUM

From recall to operate.

AI doesn't arrive as one capability — it climbs a ladder. Here's the full arc, and the three things every rung is built from.

01 Recall — find the relevant past work

LIKELY FIRST CAPABILITY

Drop in a brief and watch the closest past cases and patterns surface.

SKILL

retrieval & similarity search

PROCESS

recalling & reusing past cases

KNOWLEDGE

past case decks + their metadata

02 Assist — draft a first cut in your voice

LIKELY FIRST CAPABILITY

Get a first-cut territory drafted in your voice — ready to edit, not start from scratch.

SKILL

drafting in your voice

PROCESS

the first-draft / briefing routine

KNOWLEDGE

templates, house voice, exemplars

03 Reason — run a multi-step chain on your IP & proprietary algorithm

DISCOVERY-DEPENDENT PILOT

Watch a brief become structured territory options, every step open to edit.

SKILL

chaining + framework application

PROCESS

brief → brand core → brand territory
→ options — today, locked in decks
& strategists' minds

KNOWLEDGE

frameworks, algorithms, past
patterns

04 Critique — challenge & stress-test

FUTURE CAPABILITY

Pressure-test a direction before the room — see where it breaks, and the contrarian read.

SKILL

red-teaming + consistency checks

PROCESS

the challenge & decision points

KNOWLEDGE

quality signals, past rejections,
market data

05 Orchestrate — coordinate specialist agents

FUTURE CAPABILITY

Sit in on a synthetic workshop — specialist voices debating options for you to direct.

SKILL

multi-agent orchestration

PROCESS

the strategy workshop flow

KNOWLEDGE

role archetypes, workshop scripts

06 Operate — run end-to-end, human-gated

LONG-TERM DIRECTION

Send a brief in, get review-ready territories out — you approve at each gate.

SKILL

end-to-end execution + gating

PROCESS

delivery & sign-off, end to end

KNOWLEDGE

live briefs, outcomes, governance
rules

Skill — the AI skill we build

Process — the chlorophyll method it codifies

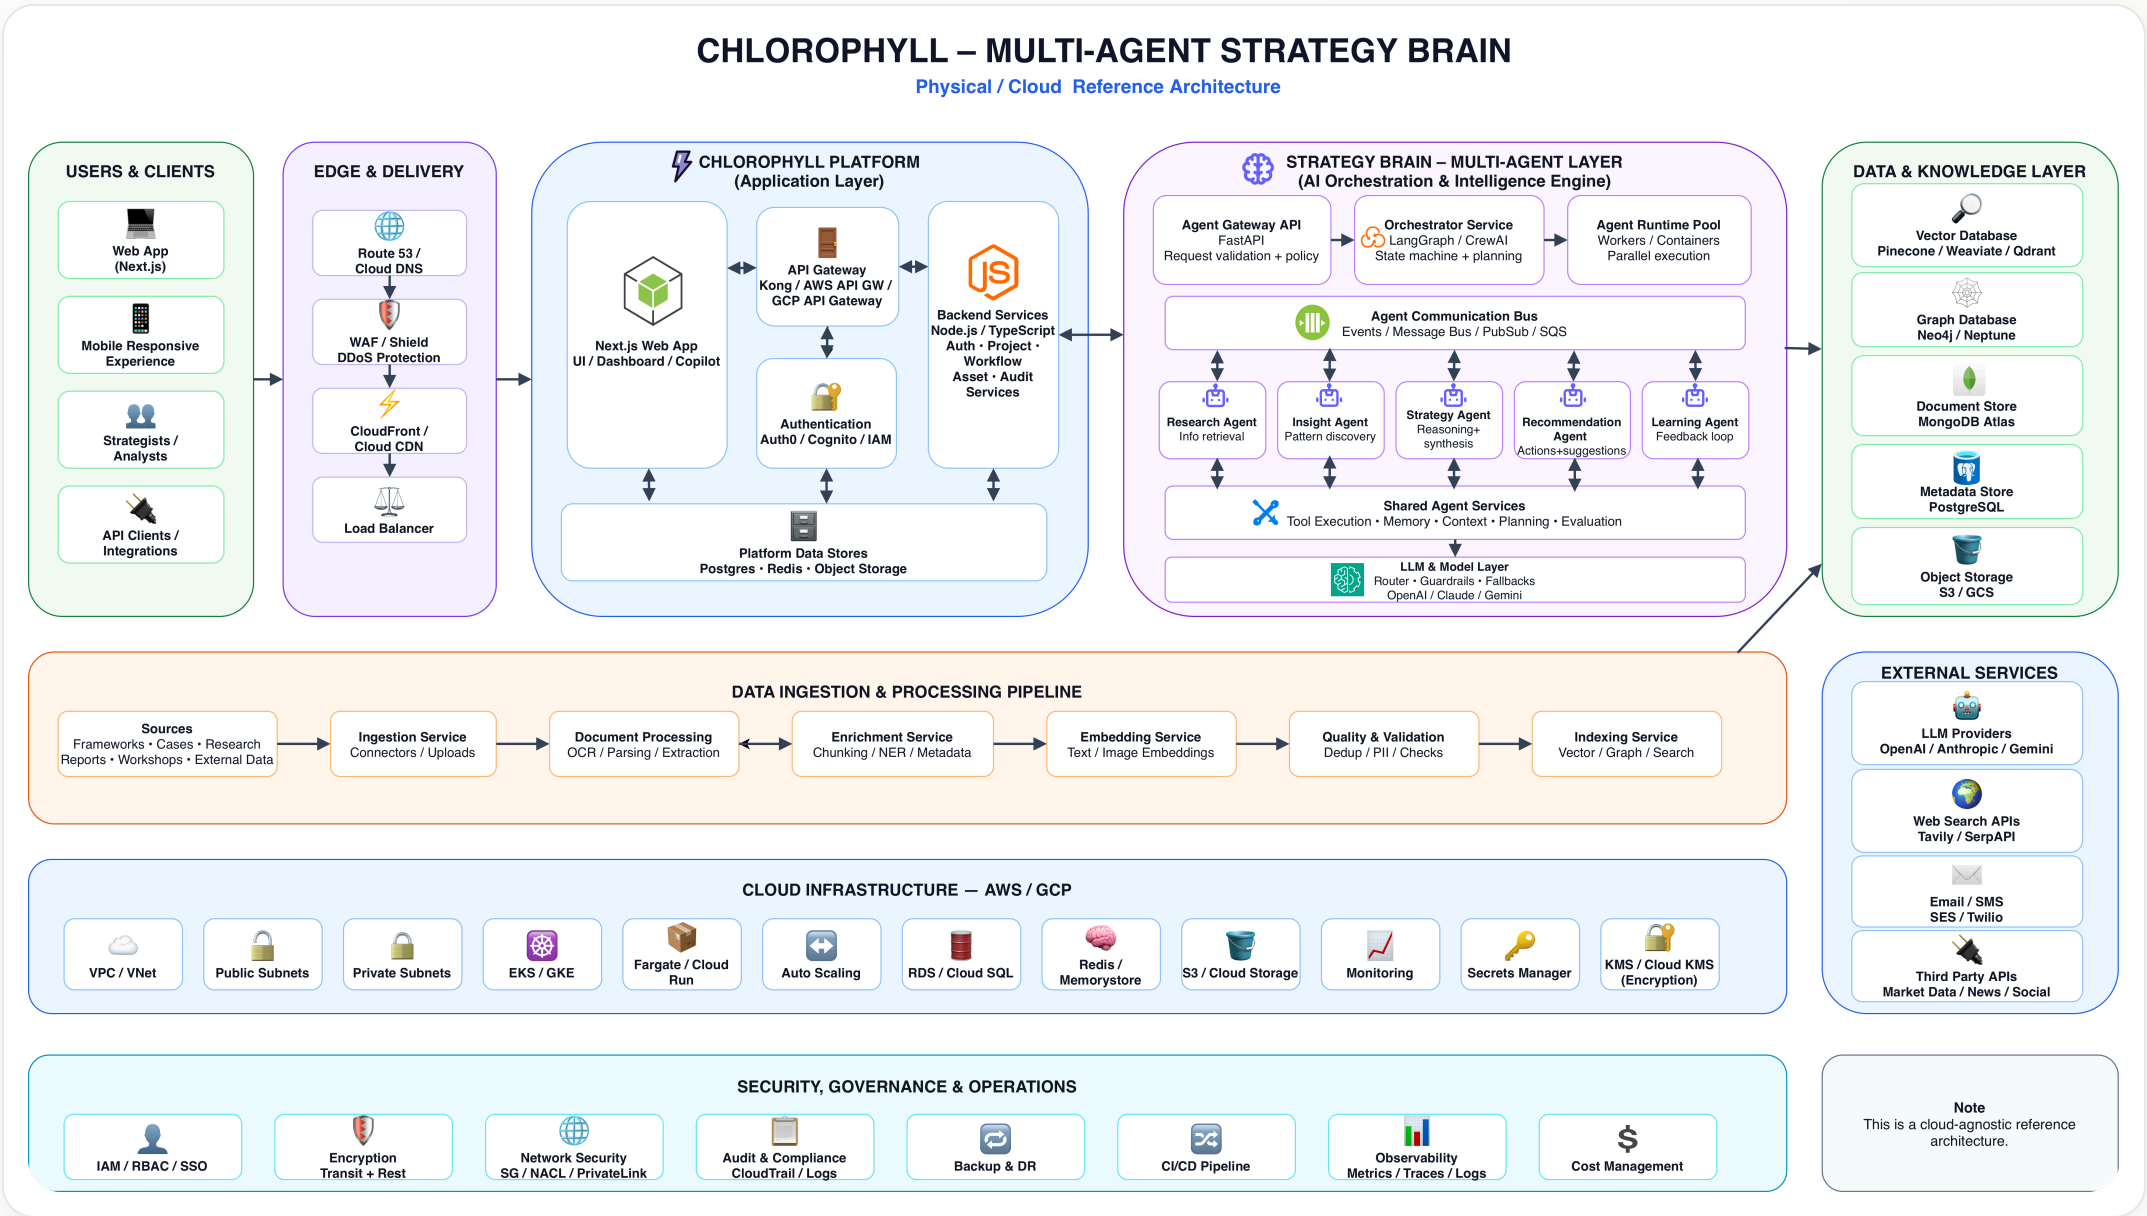

Knowledge — what data exists or might be needed

Cumulative — each rung inherits the ones below it. And the Knowledge Base is the gating dependency: you can't build the higher rungs until it encodes chlorophyll's method, not just its documents.

This engagement commits to the first three — Recall, Assist and an early Reason pilot. Everything above — Critique, Orchestrate and Operate — is subject to Discovery, built only as the foundation proves out.

The multi-agent strategy brain.

A **cloud-agnostic** reference architecture for the full build – across AWS and GCP. This is the destination the spectrum points to; indicative, with the exact shape set in Discovery.

Reference architecture – the full multi-agent vision, not this engagement's scope.

ON THIS ARCHITECTURE

- **Grounded in experience** – The proposed reference architecture is based on industry best practices and our prior experience building AI-powered knowledge and intelligence platforms.
- **Finalized in Discovery** – Cloud providers, AI models, databases, and managed services will be finalized based on security, scalability, governance, and cost requirements.
- **Illustrative, not fixed** – It is intended to illustrate the overall solution approach, and specific technology choices may evolve during Discovery.
- **Independent of the stack** – The core architecture principles – organizational memory, strategic reasoning, multi-agent orchestration, and human-in-the-loop decision support – remain independent of the underlying technology stack.
